For over 40 years LSP has been the leader in high performance VOC compliant flooring systems engineered with No-VOC and No-HAP chemistry. Chemical resistance, moisture compatibility or remediation, impact resistance, aesthetics, clean room details and hygienic finishes are all terms that spell sustainability in flooring, perhaps the single most desirable asset in a flooring system.

LSP's resinous flooring line SeamTek™ meets and exceeds all LSP standards for critical industry requirements. We offer Epoxy, Urethane Hybrid, and UV systems.

All LSP flooring systems have been engineered to fit industry specific needs. We also have the capability to hybridize individual components as required to develop a more customized approach. We service your needs with both

LSP trained employees and/or LSP trained and certified contractors nationwide.
